“Harm reduction is a set of practical strategies that when applied to injection drug use reduces the harmful consequences. It does not judge drug users, and aims at improving the overall well being of drug users. It includes strategies for safer use, managed use and abstinence. Harm reduction strategies meet drug users where they are at, addressing personal and societal conditions leading to use, along with, the use itself.”

As adopted by the Task Force—Hastings and Prince Edward
DISTRIBUTED BY THE HARM REDUCTION TASK FORCE
HASTINGS & PRINCE EDWARD REVISED April 2017
